

**Exciting
New
Product**

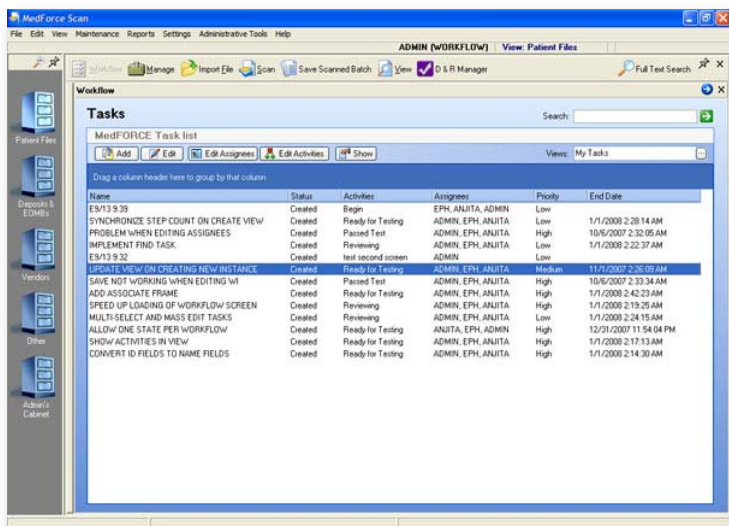

Productivity management has been redefined with the introduction of MedFORCE WorkFLOW. Before MedFORCE WorkFLOW, papers flew around your office untracked and with no accountability. They got lost and cost a lot of money to ship from one place to another.

Before MedFORCE WorkFLOW, you assigned tasks to your employees through email. Then thirty other emails came in, and your email was forgotten. While waiting for a reply you forgot to follow up.

Procedures such as patient intake, insurance verification, information requests, and other everyday tasks depend on various actions and several people handling multiple documents with many steps. You need a method of keeping track of the office "paper" trail and tasks performed by employees.

With the introduction of WorkFLOW, a new product from the makers of MedFORCE Scan, you'll no longer need a physical "paper" trail in your office. And, multiple people can work on the same document at the same time. *Three-ply paper... step aside.*

Before WorkFLOW, it was impossible to identify the extraneous / duplicate tasks or where bottlenecks might occur in the office.

- Replace manual workflows
- Eliminate the need to move paper around your office
- Know the status, location and next step of every document, task or procedure in your office at any time
- Create non-document and document based workflow tasks
- Easily update status and assign to a user
- Users see all workflow items assigned to them at sign-in
- Managers can view all tasks assigned to users at any time
- Visualize your bottlenecks
- Plus much more...

WorkFLOW From MedFORCE Technologies is a complete task and procedure management solution with the ability to interface directly with MedFORCE Scan. For a FREE demonstration call our expert sales staff today.
