

SignCenter

Electronic signature built for healthcare

SignCenter is a HIPAA-compliant, web-based electronic signature and data capture tool built specifically for healthcare. Signers can mark and sign documents using a keyboard, mouse or touch screen, from any web-enabled device.

Medforce's **SignCenter** was designed with healthcare in mind. It addresses the industry's unique security and information capture needs, and was built to seamlessly integrate with your current business applications, if you require so. The latest Eyeglass Rule from the FTC is the perfect use case for SignCenter. Your practice must comply and Medforce has a turn-key solution ready.

The SignCenter portal has been designed to allow a simple one-click and sign process. Patient acknowledgment of their prescription must be stored for at least three years according to the FTC, and SignCenter offers multiple methods for your practice to select from.

Keep your practice compliant and free from penalties with SignCenter from Medforce.

Feature Highlights:

- Flexible signature capture allows you to control the signing experience
- Meets latest FTC Eyeglass Rule requirement
- Easy to use with or without touch-screens
- Cloud-based and highly available with disaster preparedness
- HIPAA compliant
- Secure in transit and at rest
