

Home Health EVV Solutions

Filling the gaps in EVV

Medforce offers a modular solution to address the labor-intensive burden of managing mandated electronic visit verification (EVV) systems.

Use automation and management-defined logic to expedite payroll preparation, ensure your accounting is always up-to-date, and ease the working and tracking of related Medicaid claims and denials.

The three parts of the Home Health EVV Solution can be used standalone or bundled together, and can be customized to meet your unique needs.

Highlights:

- Improve payroll accuracy
- Ease labor costs associated with managing EVV programs
- Integrate data from multiple sources into a centralized resource
- Reduce denial rates through real-time claims tracking
- Gain real-time visibility
- Expedite reconciliation

EVV Payroll Preparation

Dramatically reduce the time spent reviewing, sorting and handling time sheet data for payroll entry. Medforce can automatically extract the EVV data and calculate payroll based on business rules you set – including overtime and regional differences. The solution creates a report for your quick review and adjustment. Then it generates an automated upload to your payroll system when you're ready.

EVV Accounting Data Reporting

Keep track of exact outstanding Accounts Receivable and ease the reconciliation between claims submitted and amounts paid with our EVV reporting tool. Medforce will extract claim information from your EVV system while automatically importing your matching ERN data. A report is generated based on a specific timeframe and can be pushed into your accounting software to keep outstanding balances up-to-date. The report can be generated on-demand or set to run on a scheduled basis.

EVV Accounts Receivable Management

Stop managing your outstanding claims and denials in disparate, messy and immediately out-of-date spreadsheets. Work Medicaid claims and denials quickly and effectively using automated tools to monitor, assign and track outstanding balances. This solution extracts Medicaid claim data from your EVV system into Medforce and creates a workflow task for easy tracking claims. Reduce your denial rate and improve your cash flow through smarter work assignment, centralized record keeping, and improved collaboration.
